Wednesday, May 1, 2013

The National Toxic Encephalopathy Foundation (NTEF) is pleased to announce their annual "National Toxic Encephalopathy & Chemical Injury Awareness Month". [1]

The relationship of our indoor environment to human health can no longer be denied. More and more maladies and diseases are showing a correlation to environmental toxicants, which the public has the power to mitigate.

Whether it's from bathroom air fresheners that claim to be "natural", environmentally "safer" pesticides, fragrances, BPA in food cans/kitchen products, electro-magnetic/radio frequency emissions, etc. For every toxic product there is a safer alternative that does not impact human health and the brain.

We are encouraging that for the month of May, the public enact safer and healthier alternatives and see for themselves the noticeable results from the reduction of toxins in their lives.

If the public deems it necessary to engulf their internal spaces with synthetic fragrances to mitigate an offensive odor, then they should seek to locate the source of the odor and remediate it, not just cover it up. The harmful effects will remain, only now, it will be masked with an "acceptable" scent.

Every fragrance that you perceive has to be routed through the olfactory neurons into the brain.
